

## ALGORITHM TWO

### How to hold the cube

If one edge already lines up with the cube centre piece with the same colour then move that to be at the back or the left hand side of the cube facing you.

1. Right side **Clockwise** (away from you) up
2. Rotate top layer **Clockwise** twice
3. Right side **Anti Clockwise** (towards you) Down
4. Top side **Anti Clockwise**
5. Right side **Clockwise** Up (away from you)
6. Top **Anti Clockwise**
7. Right side **Anti Clockwise** down (towards you)

The cube will continuously be rotating. It depends where you come in on the rotation cycle as to how many times you may need to repeat this process before all the edges line up.
