

ALGORITHM ONE (to get a CROSS)

HOW TO HOLD THE CUBE

If there is only the one block on top (no gun or cross bar) it doesn't matter which side is facing you to start

If there is a cross bar (see the diagram below), hold the block so the cross bar is horizontal to you. If it is a "gun" have one block facing vertically towards you and the other in a horizontal position to the right of the vertical block.

1. Front **Clockwise**
2. Right Up
3. Top **Clockwise**
4. Right Down
5. Top **Anti Clockwise**
6. Front **Anti Clockwise**

The cube will continuously be rotating. It depends where you come in on the rotation cycle as to how many times you may need to repeat this process before the cross is formed.
